

EXAMPLE #1

```
let testnumber: number = 6
testnumber = "myNumber" // This will throw an error.
testnumber = 5 // This will work

let isDone: boolean = false
isDone = "345" //This will throw an error.
isDone = true //This will work
```

EXAMPLE #2

```
orm.Item
la (alias) checkFieldError(field: string, getFieldError: (name: string) => object[], isFieldTouc
co hed: (name: string) => boolean): boolean | object[]
va import checkFieldError
• • checkFieldError("country", getFieldError, isFieldTouched)
• • • ? "error"
• • • : undefined
}
```
